

Very Important:

Do Not Install the Squadding Software unless the DryFire Single User Software (green and white disk) is already installed and operational.

The first seven (7) pages of this document will take you, in words and pictures, step by step through the software Installation process and the Dongle Driver Installation process. Make sure you complete both phases of the Installation Process.

DO NOT plug the DryFire unit in now. Later in the process, on page 3, you will be instructed to plug the DryFire unit in.

Place the DryFire Squadding disk in your CD ROM. Your CD ROM drive should auto-start, so give your computer at least 2 minutes to wake-up and auto-start. If your drive auto-started, you will soon see the screen shown below.

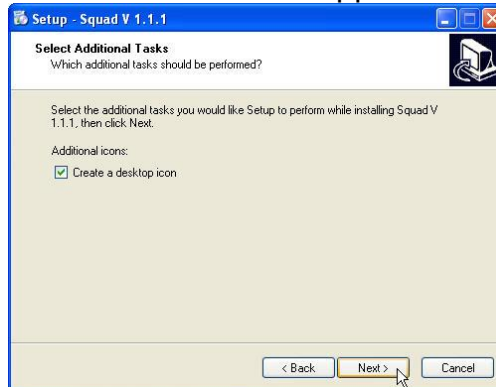

Note: If your drive doesn't auto-start, access the files on your CD-ROM drive and double click on the (setup.exe) file.

This screen will appear.

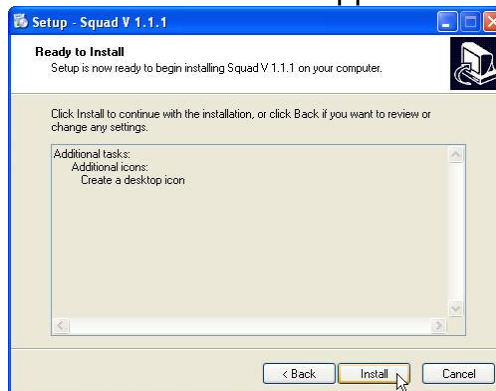

Click "Next."

This screen will appear.

Click "Next" again.

This screen will appear.

Click "Install."

The software installs, and then this screen will appear.

Click "Finish."

This Icon will now appear on your desktop.

The Squadding Software is now installed on your computer.

Special Note: The USB drivers for the DryFire Simulator should already be installed because the DryFire Single User Software (the green and white disk) was already installed before you installed the Squadding Software. **Now, plug in the DryFire unit (both the USB cable and the power cord).**

The proper response is movement of the heads, but nothing else.

If nothing else happens, skip to the next paragraph and continue. If however, the operating system responds with “NEW HARDWARE FOUND,” your DryFire USB drivers have not been installed and you will need to go back to the USB driver installation portion of your Single User DryFire software (the green and white disk) and install the drivers.

The next step will be to install the Squadding Key (Dongle) drivers. Insert the Squadding Key (Dongle) into any available USB port on your computer. Page 6 shows a picture of a Squadding Key (Dongle) plugged into a computer.

The Windows Operating System will sense a new USB device has been plugged into the computer and should respond with the “Found New Hardware Wizard” screen.

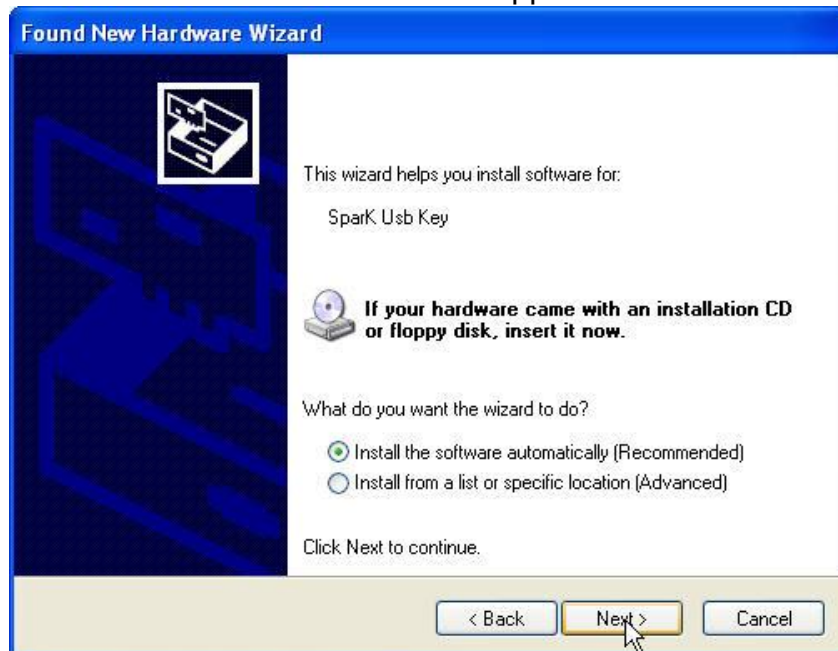

Click “No, not at this time.”

Click "Next."

This window will appear.

Click "Next" again.

This screen will appear.

Click "Continue Anyway."

After the drivers have been installed this window will appear.

Click "Finish."

You are now ready to run the Squadding Software for the first time, but make sure you read the information on page 6 and 7, as it is **IMPORTANT**.

Squadding Software Key

DryFire USA, in partnership with Kevin Berry, has made a significant investment in the concept of Squadding Software and its development into a marketable product. To protect this investment, DryFire USA has chosen to limit the use of the software to one (1) computer per sale. This has been done by the use of an extra piece of hardware (known in the industry as a “dongle”) without which the Squadding Software will not run.

The Squadding Software has been provided on a CD and can be loaded on as many computers as you want. However, you have received only one (1) **Squadding Software Key** pictured below.

Squadding Key (Dongle)

Squadding Key (Dongle) plugged into a USB connector located on this computer.

The Squadding Software Key protects DryFire USA in that one (1) Key will allow only one (1) computer to be operative at any moment in time. This does not restrict the owner from using different computers (example: a gun club owner could use the KEY at the club during the day and yet, take it home at night to be used on his home computer). Every KEY shipped out of DryFire USA will have a Serial # that has been recorded.

What happens if my KEY is lost or stolen:

The replacement cost of the KEY will be \$295.00 (this is equal to the discounted price that Youth Groups pay for Squadding Software).

Therefore, take good care of the KEY and please, don't lose it.

What if after I buy a replacement KEY I find my original KEY?

When you return the replacement KEY we will refund your \$295.00.

What if my KEY stops working during the first 6 months?

Send the KEY to DryFire USA and we will replace it for FREE.

What if my KEY stops working after the 6 month warranty period?

Send the KEY to DryFire USA and we will replace it for \$40.00.

The End of the Software Installation Phase
